

Multi-Cut

Front and rear sawing aid
for circular table saws

Article no. 3364

Watch video:

The Multi-Cut is a useful aid for safe ripping, trimming, sawing after scribe mark and upright grooving of solid wood and panel material. With the 3 clamping tips, solid wood can be held securely and advanced by means of the handle.

Due to the opposing rubber edges, even very small workpieces up to approx. 10 mm wide can be fixed securely and without damage. Fixing is done by simply clamping in the T-slot of the slide table, via adjustable guide elements for slot widths from 19 to 23 mm.

Application examples:

Longitudinal cuts or grooves of battens & panels (also on edge):

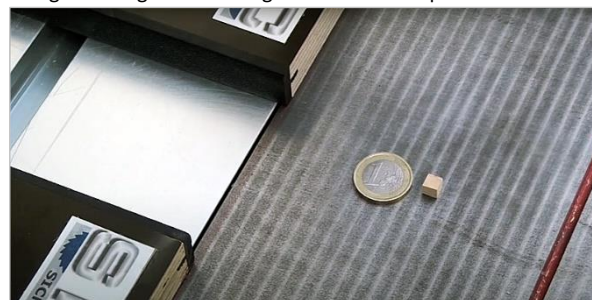

Cross sections on narrow workpieces:

Fixing & cutting of very short and small workpieces:

Fixing & damage-free cutting of smallest workpieces:

Cross sections on wide workpieces:

Secure fixation due to the clamping tips for diagonal cuts:

Remark: The star grip for clamping and the guiding element of the pushing plate (towards the operator's side) can be removed if necessary by unscrewing (see lower photo on the left).
